This is an approved list of Mechanically Stabilized Earth (MSE) Retaining Wall Systems and does not remove the requirements for the designs and materials to be approved prior to use as per Section 626 of the Standard Specification.

See the Bridge Design Manual, Table 3.10.1.4B for application of these wall systems and limitations which include:

1. No utilities shall be permitted in the reinforced fill zone.
2. Reinforcement shall not be exposed to soils with low resistivity (<3,000 ohm-cm), high sulfates (200 ppm), or high chloride (100 ppm) contents.
3. Not to be used in areas with unpredictable erosion or having uncontrolled scour below the reinforced fill zone.

Modular Block Wall Systems listed below are approved with the following conditions: 1. No utilities shall be permitted in the reinforced fill zone. 2. Not to be used in areas with erosion or scour below the reinforced fill zone. 3. Concrete must comply with requirements of Section 626.5.1.1.1. 4. Block size tolernaces must comply with the requirements of Section 626.5.1.1.2.
